**MOST COMMON FOR MANUFACTURER**

### SANTOPRENE GASKET

Santoprene gaskets are longer lasting than standard PVC gaskets and are more durable and rated for higher temperatures. Santoprene gaskets are great for drawers and warming cabinets.

### SILICONE GASKET

Silicone gaskets are best fit for ovens as they can withstand higher temperatures than PVC or santoprene gaskets.

## How to Find the Correct Gasket:

Easily find the gasket by identifying the manufacturer of the equipment and using this key to find all compatible gaskets profiles.

Then use the pictures on the following pages and confirm it is the same as the existing worn gasket. Profiles are listed in numerical order.

Measure the gasket outside edge to outside edge to get the correct dimensions of the gasket.

### SANTOPRENE GASKET

Santoprene gaskets are longer lasting than standard PVC gaskets and are more durable and rated for higher temperatures. Santoprene gaskets are great for drawers and warming cabinets.

### SILICONE

Silicone gaskets are best fit for ovens as they can withstand higher temperatures than PVC or santoprene gaskets.

# HOW TO MEASURE A GASKET

## How to Measure Outside Edge to Outside Edge

All measurements are noted as outside edge to outside edge dimensions. Please follow the instructions below to properly measure your gasket:

Take a look at the gasket currently on the door and match the style up to one of the gasket profiles.

Using a tape measure, measure the outside edge of the gasket that is currently on the door. If the gasket seems to be stretched or warped a bit, don't worry, as long as you are within 1/8 inch, the replacement gasket should install properly.

Most refrigeration door gaskets are 4 sided, but when you are working with large walk in cooler doors, you will find many of those are 3 sided gaskets with no bottom. If the gasket is NOT 4 sided, then you will need to specify which sides you would like us to include. Typically on 3 sided gaskets the bottom is a door sweep.

## How to Measure if the Gasket is Torn or Missing

Follow these instructions on how to measure if the original gasket is torn or missing.

### OPTION #1

Locate the model and serial number of your equipment. Usually they are located on a data plate similar to the one above. Give us a call and we will help locate the correct profile.

### OPTION #2

Using a tape measure, measure from the center of the dart track to the center of the opposite dart track that is on the door.

When placing your order note that the dimensions are dart to dart and we will convert your measurements to outside edge dimensions.

For step by step instructions on measuring a gasket, watch this video:
